Dan,

Attached are a couple of pictures I snapped during our site visit on August 22 showing the subsidence area. The first picture is taken from the top of the Former Active Landfill looking east towards the soil borrow area. The second picture is taken from the base of the landfill looking north with my back to the Boenker farm. The surface of the landfill used to be mounded in this area and is now bowl shaped. It is hard to grasp the magnitude of the subsidence from these pictures due to the large area it encompasses. They estimated settlement of 20+ feet.

Enjoy,

Shawn Muenks, P.E.
